## Summary

Software Engineer with 6 years of experience building scalable, high-throughput microservices and cloud-native applications using Java, Spring Boot, Python, and AWS. Proven expertise in designing event-driven architectures with Kafka and Kinesis, processing thousands of financial transactions per second with low latency and high reliability. Experienced in developing AI-powered systems using LLMs and RAG workflows to enable intelligent decision-making and automation in production environments. Strong background in distributed systems, improving system throughput by 30%+ and reducing latency across enterprise platforms. Skilled in Docker, Kubernetes, CI/CD, and observability tools, maintaining 99.9%+ availability while delivering high-impact solutions across banking, retail, and e-commerce domains.

## Skills

- **Programming Languages:** Java, Python, JavaScript, TypeScript, SQL
- **Backend Development:** Spring Boot, Microservices Architecture, REST APIs, Distributed Systems, gRPC, WebSockets, Asynchronous Processing, API Gateway, Service Discovery (Eureka), Resilience4j
- **Frontend Development:** React.js, Angular, HTML5, CSS3, JavaScript, TypeScript
- **Cloud & DevOps:** AWS (EC2, S3, RDS, Lambda, ECS, EKS, DynamoDB, CloudFormation, AWS CDK), Docker, Kubernetes, CI/CD (Jenkins, GitHub), Infrastructure as Code (IaC)
- **Event Streaming & Messaging:** Apache Kafka, AWS Kinesis, Event-Driven Architecture, Stream Processing
- **Databases & Caching:** MySQL, PostgreSQL, MongoDB, DynamoDB, Redis, Query Optimization, Indexing, Database Sharding
- **AI/ML & Data Engineering:** Python, scikit-learn, LLMs, RAG, LangChain, LangGraph, Fraud Detection Systems
- **Observability & Performance:** Prometheus, Grafana, ELK Stack, New Relic, AWS X-Ray, Distributed Tracing, Logging & Monitoring, Performance Tuning, Load Testing (JMeter, Locust)
- **Security:** OAuth2, JWT Authentication, API Security, Secure Data Handling, Compliance
- **System Design & Architecture:** High-throughput Systems, Low-latency Architectures, Scalability, Fault Tolerance, Idempotency, Monolithic & Microservices Architecture, Event-Driven Systems
- **Software Engineering Practices:** OOP, Design Patterns, Unit Testing (JUnit, Mockito), Code Reviews, Refactoring, API Documentation (Swagger), Debugging, Agile/Scrum
- **Version Control & Tools:** Git, GitHub, Bitbucket, Postman, Selenium

## Experience

### Software Engineer | PNC Bank, USA

Feb 2026 – Present

- Engineered scalable microservices using **Java 17, Spring Boot, and AWS (Lambda, ECS, DynamoDB)**, processing **15K+ financial transactions/sec** with **sub-100ms latency**, improving system throughput by 35% and enabling real-time underwriting and risk decisioning.
- **Designed and built** scalable microservices using **Java 17, Spring Boot, and AWS**, processing **15K+ transactions/sec with sub-100ms latency**, improving system throughput by 35% and enabling real-time underwriting decisions for risk platforms.
- **Architected event-driven systems** using **Apache Kafka and AWS Kinesis**, handling **10K+ events/sec across 15+ downstream services**, ensuring fault-tolerant, low-latency data pipelines for financial transactions.
- **Developed an AI-powered fraud detection system** using **Python, scikit-learn, and RAG-based LLM workflows**, analyzing **millions of transactions daily**, reducing detection latency by 40% and improving anomaly detection accuracy.
- **Led cloud-native infrastructure design** using **Docker, Kubernetes (EKS), and AWS**, implementing auto-scaling and circuit breaker patterns to achieve **99.9% system availability** under peak traffic conditions.
- **Improved system reliability and observability** by implementing **distributed tracing, Prometheus, Grafana, and ELK**, reducing **MTTR by 30%** and enabling proactive incident detection across microservices.
- **Built secure, high-throughput APIs** using **OAuth2, JWT, and Spring Security**, ensuring compliance with financial regulations and supporting integrations across internal and external platforms.

### Software Engineer | Insight Global, India

Nov 2021 – Aug 2024

- **Designed and built backend microservices** using **Java, Spring Boot, and REST APIs**, supporting enterprise applications handling **5K+ requests/sec**, reducing response latency by 30% and improving system scalability across distributed architectures.
- **Developed and owned front-end dashboard modules** using **React.js, Angular, and TypeScript**, enabling real-time data visualization and improving user engagement and reporting efficiency for business stakeholders.

- **Engineered event-driven data pipelines** using **Apache Kafka**, processing **8K+ events/sec** across multiple enterprise workflows, improving system throughput and ensuring reliable asynchronous communication between microservices.
- **Integrated and optimized AWS cloud infrastructure (EC2, S3, RDS, Lambda)**, reducing infrastructure costs by **20%+** through efficient resource provisioning and improving deployment flexibility for client applications.
- **Led containerization and deployment efforts** using **Docker and Kubernetes**, streamlining CI/CD pipelines via Jenkins and reducing release cycle time by **25%**, enabling faster and more reliable feature delivery.
- **Optimized database performance** using **MySQL and PostgreSQL indexing, query tuning, and caching strategies**, reducing query execution time by **35%** for large-scale analytics workloads.
- **Improved system reliability and fault tolerance** using **Resilience4j (circuit breakers, retries)**, preventing cascading failures and ensuring stable performance under peak traffic conditions, reducing incident rates in production environments.

Software Developer | Flipkart, India

Mar 2019 – Oct 2021

- **Designed and built backend microservices** using **Java and Spring Boot**, supporting **50M+ monthly active users** and processing **20K+ requests/sec during peak sale events**, reducing API latency by **30%** and improving system scalability across distributed commerce platforms.
- **Developed and optimized REST APIs** for product catalog services managing **10M+ product listings**, improving search response times by **35%** and enabling faster product discovery across marketplace categories.
- **Engineered Redis caching layers** for product metadata and inventory systems, reducing database load by **40%** and improving response times during **Big Billion Days traffic spikes**, ensuring high availability under peak load.
- **Optimized MySQL and MongoDB queries** for large-scale catalog systems, reducing query execution time by **45%** and improving performance for high-volume product search and checkout workflows.
- **Built Kafka-based event streaming pipelines** processing **15K+ events/sec**, enabling real-time synchronization of order, inventory, and logistics systems, reducing order processing delays and improving operational efficiency.
- **Implemented service discovery (Eureka) and API gateway routing**, improving inter-service communication efficiency by **25%** and enabling scalable microservice interactions across distributed systems.
- **Applied circuit breaker patterns (Hystrix)** to handle downstream failures, reducing system failure rates and preventing cascading outages during high-traffic sale events.
- **Deployed and managed cloud infrastructure on AWS (EC2, S3)**, optimizing resource utilization and reducing infrastructure costs by **15%**, ensuring high availability for critical commerce services.
- **Implemented Infrastructure as Code (AWS CDK, CloudFormation)** to standardize deployments, reducing environment setup time by **30%** and improving release reliability.
- **Containerized applications using Docker and Kubernetes** and automated CI/CD pipelines via Jenkins and Git, reducing deployment time by **40%** and enabling faster feature delivery across teams.
- **Implemented centralized logging and monitoring using ELK Stack and Splunk**, reducing incident detection time by **30%** and improving system observability across distributed services.
