Software Engineer · Java · Spring Boot · AWS · Kafka · Kubernetes · Distributed Systems · AI/LLM Workflows

SUMMARY

Software Engineer with 6 years of experience designing and building high-throughput, low-latency backend platforms using Java, Spring Boot, AWS, Kafka, Kubernetes, and distributed systems. Experienced in developing cloud-native microservices, event-driven transaction pipelines, REST/gRPC APIs, and fault-tolerant services supporting real-time fraud, risk, underwriting, inventory, and e-commerce decisioning. Proven ability to improve system throughput, reduce latency, optimize database and caching layers, and strengthen production reliability through observability, CI/CD automation, idempotency, retry/DLQ patterns, circuit breakers, and scalable cloud deployments. Hands-on experience integrating AI/ML and RAG-based LLM workflows into transaction intelligence and fraud detection use cases.

SKILLS

Programming Languages: Java, Python, JavaScript, TypeScript, SQL

Backend Engineering: Java 17, Spring Boot, Spring Security, Microservices, REST APIs, gRPC, WebSockets, API Gateway, Service Discovery, Resilience4j, Distributed Systems

Cloud & DevOps: AWS — EC2, S3, RDS, Lambda, ECS, EKS, DynamoDB, CloudWatch, X-Ray, CloudFormation, AWS CDK; Docker, Kubernetes, Jenkins, GitHub Actions, CI/CD, Infrastructure as Code

Event Streaming & Messaging: Apache Kafka, Kafka Streams, AWS Kinesis, Event-Driven Architecture, Stream Processing, Retry/DLQ Patterns, Idempotent Consumers, Backpressure Handling, Fault-Tolerant Messaging

Databases & Caching: PostgreSQL, MySQL, MongoDB, DynamoDB, Redis, Query Optimization, Indexing, Partitioning, Database Sharding, Caching Strategies

System Design & Reliability: High-Throughput Systems, Low-Latency Architecture, Scalability, Fault Tolerance, Circuit Breakers, Rate Limiting, Load Balancing, SLO/SLA Monitoring, Incident Response, Performance Tuning, Monolithic-to-Microservices Migration, Event-Driven Systems

Observability & Monitoring: Prometheus, Grafana, ELK Stack, Splunk, New Relic, AWS X-Ray, Distributed Tracing, Centralized Logging, Log Correlation, MTTR Reduction

Security & API Engineering: OAuth2, JWT Authentication, Spring Security, API Security, Secure Data Handling, Compliance, OpenAPI/Swagger, SonarQube, Snyk Security Scanning

AI/ML & Data Engineering: Python, scikit-learn, Fraud Detection Systems, LLMs, RAG, LangChain, LangGraph, Data Pipelines, Transaction Intelligence

Frontend Development: React.js, Angular, HTML5, CSS3, JavaScript, TypeScript

Testing & Engineering Practices: Unit Testing, JUnit, Mockito, Postman, Selenium, Load Testing, JMeter, Locust, OOP, SOLID Principles, Design Patterns, Code Reviews, Refactoring, Debugging, Agile/Scrum

Version Control & Tools: Git, GitHub, Bitbucket

EXPERIENCE

Software Engineer | PNC Bank, USA

Feb 2026 – Present

- Engineered cloud-native fraud and risk decisioning microservices using Java 17, Spring Boot, AWS Lambda, ECS/EKS, and DynamoDB, processing **15K+** financial transactions/sec at **sub-100ms** latency while improving platform throughput by **35%**.
- Designed Kafka/Kinesis event-driven pipelines across 15+ services for transaction ingestion, enrichment, scoring, and downstream publishing, implementing idempotent consumers, retry/backoff logic, and DLQ patterns to prevent duplicate processing and message loss.
- Optimized DynamoDB, PostgreSQL, and Redis access layers through partition-aware queries, indexing, caching strategies, and connection tuning, reducing database bottlenecks and supporting high-volume real-time transaction workloads.
- Deployed resilient backend services on Docker and Kubernetes with autoscaling, health checks, circuit breakers, rate limiting, and rollback-ready release patterns, helping maintain **99.9%+** availability for fraud, risk, and underwriting workflows.
- Developed secure REST/gRPC APIs using Spring Security, OAuth2, JWT, and API Gateway to support real-time decisioning integrations across fraud detection, risk scoring, transaction intelligence, and downstream banking platforms.
- Built AI-assisted fraud detection workflows using Python, scikit-learn, and RAG-based LLM patterns to analyze transaction behavior, reduce detection latency by **40%**, and improve anomaly identification for suspicious activity.
- Instrumented production observability using Prometheus, Grafana, ELK, New Relic, and AWS X-Ray for distributed tracing, centralized logging, SLA/SLO monitoring, and incident response, reducing MTTR by **30%**.
- Automated CI/CD pipelines using Jenkins, GitHub Actions, Docker, and Kubernetes with automated testing, deployment validation, and rollback-ready releases to improve production release reliability.

Software Engineer | Insight Global, India

Nov 2021 – Aug 2024

- Designed and scaled enterprise backend microservices using Java, Spring Boot, and REST APIs, supporting **5K+** requests/sec across distributed applications while reducing API response latency by **30%**.
- Implemented Kafka-based event streaming pipelines processing **8K+** events/sec for asynchronous communication across backend services, reporting systems, and downstream business workflows.
- Developed full-stack dashboard modules using React.js, Angular, TypeScript, and REST APIs, enabling real-time reporting, operational visibility, and data visualization for business stakeholders.
- Optimized Redis, MySQL, and PostgreSQL performance through caching strategies, indexing, query tuning, and connection optimization, reducing query execution time by **35%** and improving service responsiveness.
- Modernized application deployments using Docker, Kubernetes, Jenkins, Git-based CI/CD pipelines, and AWS EC2, S3, RDS, and Lambda, improving release cycles by **25%** and reducing infrastructure costs by **20%+**.
- Improved production reliability by implementing Resilience4j circuit breakers, retries, timeouts, and fallback patterns, while refactoring legacy components into modular service layers to reduce cascading failures.
- Documented and tested service integrations using Swagger/OpenAPI, Postman, JUnit, Mockito, and code reviews within Agile/Scrum delivery, improving maintainability, onboarding, and cross-team collaboration.

Software Developer | Flipkart, India

Mar 2019 – Oct 2021

- Engineered Java/Spring Boot microservices for product catalog, checkout, inventory, and order workflows, supporting **50M+** monthly active users and **20K+** requests/sec during peak sale events while reducing API latency by **30%**.
- Built RESTful backend services for order reconciliation, inventory synchronization, and catalog refresh workflows, improving transaction consistency across checkout, fulfillment, and logistics systems.
- Integrated Redis caching for high-frequency catalog, checkout, and inventory APIs, reducing database load by **40%** and improving response times for customer-facing e-commerce workflows.
- Optimized MySQL and MongoDB data models using indexing, query tuning, schema optimization, and read/write access pattern improvements, reducing query execution time by **45%** for large-scale catalog and search workloads.
- Developed Kafka event pipelines processing **15K+** events/sec with idempotency controls for real-time order, inventory, and logistics synchronization across distributed services.
- Created Spring Batch jobs for reconciliation, settlement, catalog refreshes, and inventory updates, improving batch processing reliability and reducing manual operational effort.
- Implemented Eureka service discovery, API Gateway routing, Hystrix circuit breakers, retries, and fallback patterns to improve inter-service communication and prevent cascading failures during high-traffic sale events.
- Automated deployments using Jenkins, Git, Docker, and Kubernetes, improving deployment speed by **40%**, and enhanced production monitoring through ELK Stack and Splunk, reducing incident detection time by **30%**.
- Documented and validated REST API contracts using Swagger/OpenAPI and Postman, improving integration clarity for frontend, QA, and downstream service teams.

EDUCATION**Master of Science, Business Analytics**

Dec 2025

University of Cincinnati | GPA: 3.85

B. Tech in Civil Engineering

Apr 2018

Bapatla Engineering College | GPA: 3.2
